

Citrix XenApp Fundamentals (new name for Citrix Access Essentials)

Access corporate Windows® programs and files conveniently and securely over the Web without needing to:

- Rewrite applications
- Upgrade PCs
- Increase network bandwidth

Simple and Secure Remote Access

Citrix XenApp™ Fundamentals is a cost-effective solution that is specially designed, packaged and priced to bring secure remote access and simple, centralized management within easy reach of organizations with up to 75 remote users. Through an Internet connection, it turns a Microsoft® Windows Server® into the secure access point for client/ server applications, files and internal websites, allowing you to control who gets access to files and how they can print and store them. Your users experience the same responsiveness as if they were right in the office, even if they're actually across town or across the country.

Transparent and Convenient Access – From Anywhere at Anytime

Increase employee satisfaction by offering flexible work environments with fast, simple and convenient access to corporate information from wherever they happen to be — at a branch office, while traveling or at home. XenApp Fundamentals seamlessly extends their workplace so they can get to key applications like sales force automation, order processing and inventory systems, increasing employee productivity while away from the office.

Simple Configuration and Management

Automated step-by-step wizards take the guesswork out of configuring, personalizing and managing the remote access environment, with relatively little effort or training needed. The ease and simplicity of centrally controlling and updating Windows Server applications means updates that used to take weeks now take minutes, leaving your System Administrator more time to focus on strategic IT initiatives.

Safe and Secure Remote Environment

The System Administrator can assign access to specific applications and folders to role-based user groups, ensuring that valuable information doesn't fall into the wrong hands. Plus, you can control where users can save or print files so that it remains secure. And of course, XenApp Fundamentals scrambles all remote transmissions with secure encryption so your communications remain private, even over the very public Internet.

Quick and Easy Management with Windows Essential Business Server®

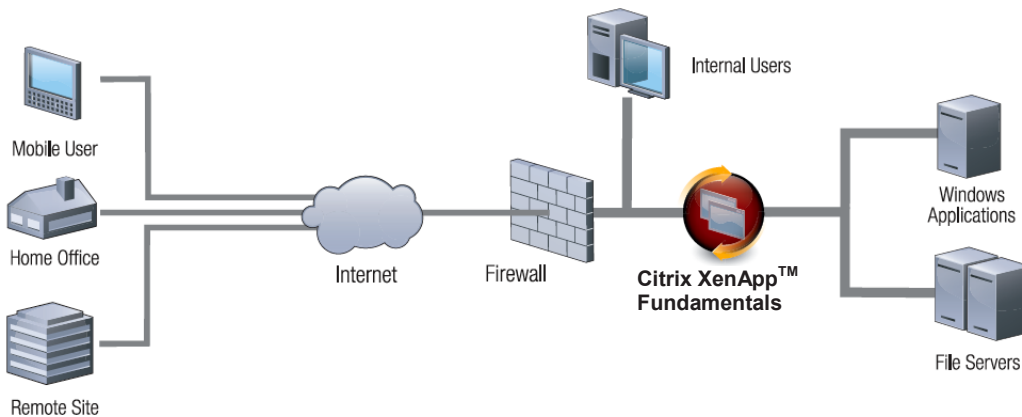

XenApp Fundamentals is fully integrated in the Essential Business Server (EBS) management console, allowing you to administer application publishing and other key components from one central location. Providing an integrated purchase experience, CAL management, administration and security, managing the remote access of your applications has never been easier. XenApp Fundamentals also leverages the resources available with Windows Small Business Server.

Load Balancing for a Seamless User Experience

XenApp Fundamentals automatically spreads users across multiple servers, ensuring optimal performance for all users. If a server goes down, users are automatically re-directed to an available server and new sessions bypass the failed server to minimize costly help desk or support calls and maintain employee productivity.

Built on a Proven Foundation

Only Citrix XenApp Fundamentals helps you overcome the difficulties of trying to deliver line-of-business applications beyond the range of the local network. Our unique application delivery approach takes location, distance, bandwidth and device variables out of the picture, so you can ensure that applications and other online resources are fully, yet securely, accessible outside the main site. Equally important, it streamlines system administration, so you can spend less time and money caring for computer systems. As the most cost-effective remote access solution, XenApp Fundamentals includes TS CALs.

Your company will welcome significant improvements in critical processes, employee productivity, data security, customer satisfaction — and the bottom line. More than 215,000 organizations across the globe already depend on Citrix for secure, on-demand access to their online assets from the most convenient locations. So take a look at Citrix XenApp Fundamentals. And turn your toughest access challenges into your biggest business advantage. You'll be in good company.

Your authorized Citrix® Solution Advisor can help you find out how.
